

1. Define the following concepts: (3.5pt)

- Construct:.....
- questionnaire.....

2. Provide the missing technical words/expressions: (6pts)

- If a research measure covers all the aspects of a given construct, the measure then has
- If the reproduction of a given study constantly provides similar results, the study is characterised as
- If a given research tool provides the impression of being valid, then it has
- Data collected by a researcher using his own methods is characterised as
- Data extracted by a researcher from already available sources is called
- If a research tool accurately measures what the researcher intends to measure, then the research tool has
- If a researcher proves that the results obtained from a given study are due to his/her treatment, the study then has, while if a researcher proves that the results obtained from a given study can be generalised from the study sample to a larger population, the study then has

3. Mention four methods of data collection in research (3pts)

-
-
-
-

4. Mention three methods of administering a questionnaire (2.25pts)

-
-
-

5. A number of factors should be considered before a researcher decides whether to choose an interview or a questionnaire for data collection. Mention three of such factors: (2.25pts)

-
-
-
-

6. Mention two examples of individual construct (1.5pt)

-
-

7. Mention two examples of social construct (1.5 pt)

-
-
